

TWO STAGE PLOW

The Viking-Cives Two Stage Plow gives you all of the advantages of the Viking-Cives standard plows with the ability to scrape the roadway clear of ice and snow with one pass. The spring steel individual carbide scraper teeth remove much of the snow traditionally left by a plow. The result is the application of less chlorides required, making this an environmentally friendly product. Air down pressure applied to the second blade allows it to follow contours, cross-fall elevations, and wheel rutting. Your road will melt off faster and your entire road system will be safer using the Viking-Cives Two Stage Plow. This plow is easily adapted to most trucks. It can be used as a standard plow or with the second blade deployed.

*“The more snow you remove mechanically,
the less salt required!”*
